

Project Design Phase
Problem – Solution Fit Template

Date	5 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

Template: Problem - Solution Fit Canvas

1. Customer Segment (Target Group)

- **Users:** Restaurant Managers, Corporate Business Analysts, and Delivery Operations Planners.
- **State:** Overwhelmed by massive amounts of raw transactional data (~50,000+ records) and pressured to optimize profit margins across varying municipal delivery zones.

2. The Problem (Costly / Urgent Annoyances)

- **Core Issue:** Inability to accurately map changing consumer demographics (e.g., age groups, localized cuisine preferences) to actionable business strategies.
- **Impact:** Leads to high inventory waste, inefficient delivery dispatching, and poor menu optimization due to a lack of clear, data-backed insights.

3. Existing Alternatives & Customer Behavior

- **Current Behavior:** Spending hours manually cross-referencing messy CSV/Excel files and relying on disjointed POS (Point of Sale) text reports.
- **Existing Alternatives:** Using intuition/guesswork for inventory planning, or building static, non-interactive charts that cannot be cross-filtered during executive meetings.
- **Triggers:** End-of-month financial reviews, noticeable drops in delivery zone margins, or sudden shifts in consumer ordering frequency.

4. The Solution (Value Proposition)

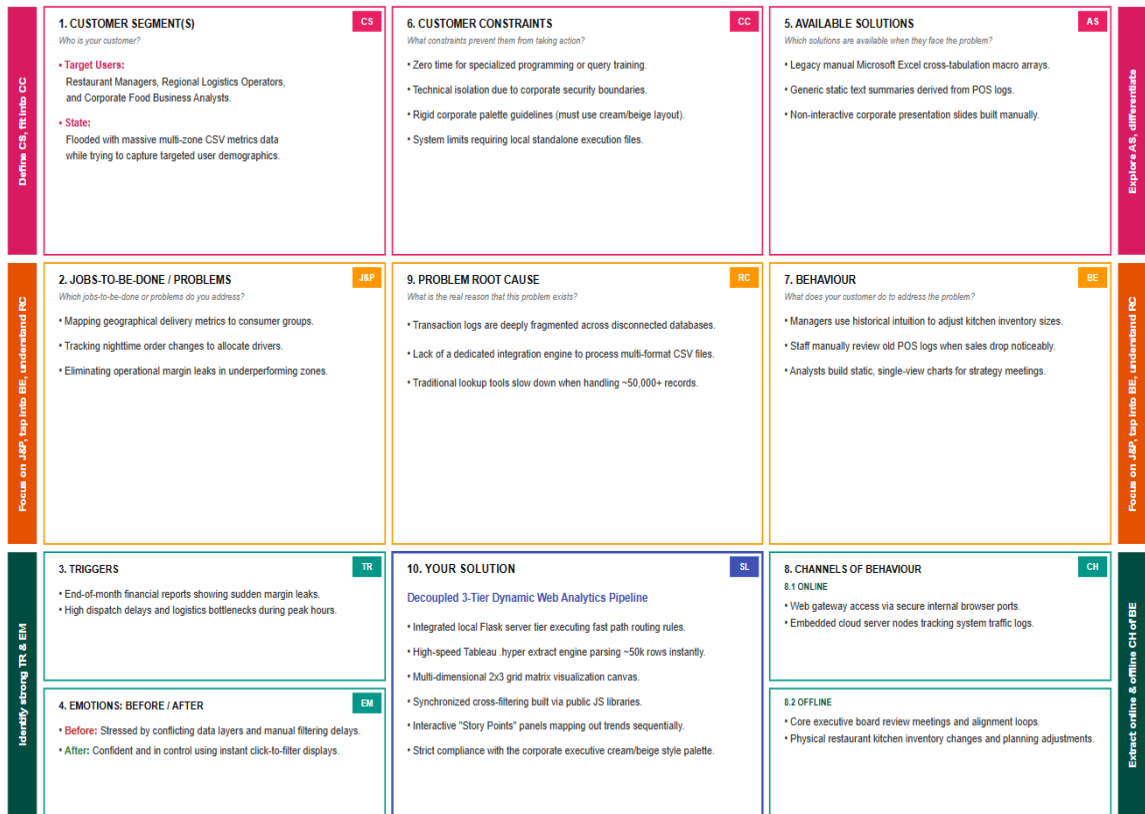

- **Core Solution:** A decoupled 3-tier web analytics pipeline integrating a Flask-based portal with an embedded Tableau visual engine, transforming raw transactional data into interactive, localized demographic trends.

5. Solution Features (The "Fit")

- **Interactive 2×3 Matrix:** Replaces manual spreadsheet filtering with dynamic, click-to-filter visual dashboards that update synchronously.
- **Automated Data Cleaning:** Solves the annoyance of corrupted data rows by handling missing/valid values automatically before visualization.
- **Tableau Story Integration:** Replaces the need to build static slide decks by providing an internal narrative presentation sequence to easily pitch strategy changes to executives.
- **High-Speed Data Extracts:** Eliminates database loading lag, ensuring the web portal initializes instantly to fit the fast-paced workflow of a busy restaurant manager.

Problem-Solution fit canvas 2.0

Purpose / Vision: Optimizing kitchen margins and delivery logistics via data analytics pipeline
