

Project Performance Testing

Date	8 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendering	 Successfully loaded and processed 50,000 transaction records, mapping all metrics and dimensions for interactive analysis.
2.	Data Preprocessing	 Executed a 7-step pipeline: importing, cleaning nulls, removing duplicates, validating data types, ensuring consistency, creating custom calculated fields, finalizing the dataset for analysis.

3.	Utilization of Filters	Filters used: Aggregation functions: SUM(Usage) was primarily used for total load mappings, and AVG(Usage) was applied to monitor ongoing baseline shifts Implemented interactive filters for City, Meal Type, and Restaurant Segment to support dynamic data exploration.
4.	Calculation fields Used	IN this Visualization (Total Orders) Use Create Calculation field and other visualization normal calculation fields Use. Logic / Syntax: Mapped via custom integer parameters linked with rank/index functions (INDEX()) to dynamically filter states based on the selection. Developed key metrics: TotalOrders, Total Delivery Fee, Total Order Value, and Avg. Rating. Purpose: Solves Tableau's order of operations conflict, allowing the dashboard to dynamically rank the top or bottom states within specific geographical region filters without breaking.
5.	Dashboa rd design	Food Ordering Behaviour and Consumer Trends Dashboard : ? Visualizations : KPI Demonstration (Table showing Count, Fee, Value, and Rating) ? City Vs Cuisine (Heatmap) ? Orders By Age Group & Restaurant Type (Stacked Bar Chart) ? Cuisine Preference Distribution (Pie Chart) ? Company Type & Meal Type Orders (Bar Chart) ? Meal Type Vs Customer Rating (Donut Chart)

		🔍 Top 5 Cities By Order Volume (Bar Chart) 🔍 Revenue Contribution By Meal Type & Ordering Based On Mood (Combination Chart)
