Project : Food Ordering Behaviour and Consumer Trends

Problem Statement (PS)	I am	I'm trying to	But	Because	Which makes me feel
PS-1	A Business Analyst	Analyze food ordering behaviour and customer preferences using data.	It is difficult to identify meaningful trends from large datasets.	The raw data is complex and lacks clear visual representation.	Frustrated
PS-2	An Operations Manager	Improve delivery performance and operational efficiency.	It is challenging to identify delivery delays and peak demand periods.	The available data is scattered and not presented through interactive dashboards.	Concerned
PS-3	A Food Delivery Customer	Receive fast delivery and a better food ordering experience.	Delivery times and service quality are not always consistent.	Customer expectations vary based on delivery speed, pricing, and food quality.	Dissatisfied
