

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	5 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	City-wise Order Distribution Analysis	1. Display the total number of food orders across different cities.2. Enable filtering of orders based on selected city.3. Compare customer ordering behavior among different locations.
FR-2	Customer Age Group Analysis	1. Categorize customers into different age groups.2. Analyze food ordering patterns across age categories.3. Compare age groups with their preferred restaurant types or cuisines.
FR-3	Cuisine & Restaurant Preference Analysis	1. Display the popularity of different cuisines.2. Compare customer preferences among restaurant types.3. Analyze cuisine demand based on customer demographics.
FR-4	Order Value & Customer Rating Analysis	1. Visualize order value distribution across customers.2. Analyze customer ratings for different restaurant categories.3. Identify relationships between order value and customer satisfaction.
FR-5	Delivery Performance & Repeat Customer Analysis	1. Analyze delivery time and delivery efficiency.2. Compare repeat and first-time customer orders.3. Display overall business insights using the Tableau dashboard and Story Points.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard provides a simple and user-friendly interface with interactive charts and filters. Users can easily explore the data using Tableau visualizations without requiring technical knowledge.
NFR-2	Security	The application securely manages local project files and Flask configuration settings. Only authorized users can modify the source code and dataset used for analysis.
NFR-3	Reliability	The system consistently generates accurate visualizations from the dataset. Data cleaning and validation ensure that incomplete or invalid records do not affect dashboard results.
NFR-4	Performance	The dashboard loads quickly and provides smooth interaction with filters and charts. The application efficiently processes the dataset to display visualizations with minimal delay.
NFR-5	Availability	The application is accessible through a web browser whenever the local Flask server or deployed application is running. The Tableau dashboard remains available through Tableau Public after publishing.
NFR-6	Scalability	The system can accommodate larger datasets and additional visualizations with minimal changes. New dashboards, filters, and analytical features can be integrated without affecting existing functionality.
