

Ideation Phase

Empathize & Discover

Date	5 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Example: Food Ordering & Delivery Application

The Empathy Map was created to better understand the needs, expectations, challenges, and behaviours of stakeholders involved in the food delivery business.

It captures what users **think and feel**, **hear**, **see**, and **say & do** while interacting with food ordering services and business data.

The map also highlights the **pain points**, such as difficulty in analysing large datasets and monitoring delivery performance, along with the **gains**, including interactive dashboards, improved customer insights, and data-driven decision-making.

This exercise helped identify user requirements and guided the development of an effective Tableau dashboard for analysing food ordering behaviour and consumer trends.
