

Project Design Phase-II Customer Journey Map

Date	5 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	4 Marks

Customer Journey Map: Food Trends Analytics Portal

Scenario: A Corporate Manager or Business Analyst leveraging the portal to identify local consumer trends, optimize restaurant kitchen operations, and present data-backed menu changes to stakeholders.

1. Entice (Discovery & Awareness)

- **Steps:** The analyst experiences a need for localized consumer insights to address high logistics overhead or falling revenue segments across delivery zones.
- **Interactions:** Internal corporate communications, Flask portal landing dashboard link.
- **Goals & Motivations:**
 - *"Help me identify underperforming delivery locations."*
 - *"Help me avoid making high-cost inventory errors based on pure guesswork."*
- **Positive Moments:** Realizing a single web application provides immediate access to centralized regional food transaction data sets.
- **Negative Moments:** Worrying about data latency or sorting through unorganized legacy Excel logs manually.
- **Areas of Opportunity:** How might we send automated weekly digest cards highlighting major shifting food trends directly to the management team's inbox?

2. Enter (Initialization & Loading)

- **Steps:** The analyst launches the Flask web shell app and initializes the interactive embedded view window.
- **Interactions:** Desktop browser framework, localized data loading engines.
- **Goals & Motivations:**
 - *"Help me access the analytical environment instantly without loading errors."*

- *"Help me see immediately that the tool is operating with clean metrics."*
- **Positive Moments:** The workspace environment initializes rapidly, bypassing heavy, raw database lookups using optimized extract engines.
- **Negative Moments:** Seeing blank canvas regions for a brief second during initial rendering phases.
- **Areas of Opportunity:** How might we implement an elegant loading overlay that displays quick analytical system tips while data streams finish processing?

3. Engage (Deep Analysis & Data Interaction)

- **Steps:** The analyst manipulates interactive filters (e.g., cross-tabulating age demographics, local cuisine preferences, and municipal zones) across the 2x3 visualization layout.
- **Interactions:** Embedded interface canvas, dynamic clickable filter elements.
- **Goals & Motivations:**
 - *"Help me discover exactly what dishes younger consumers are ordering during peak night hours."*
 - *"Help me make smart decisions about regional restaurant supply levels."*
- **Positive Moments:** Selecting a single chart filter instantly triggers fluid updates across all five neighboring layout modules synchronously.
- **Negative Moments:** Getting overwhelmed by deep data dimensions if too many filter categories are active simultaneously.
- **Areas of Opportunity:** How might we provide a one-click "Reset Grid Filters" command to easily restore the original system view?

4. Exit (Insight Synthesis & Reporting)

- **Steps:** The analyst builds a step-by-step narrative presentation using the system's story points feature to map out their strategy for executive review.
- **Interactions:** Interactive storyboard canvas, navigation progress steps.
- **Goals & Motivations:**
 - *"Help me share these customer trend findings clearly with corporate stakeholders."*
 - *"Help me leave this session with full confidence in our new operational plan."*
- **Positive Moments:** The clear, sequenced presentation panels display beautifully, eliminating the need to export static screenshots into slide decks.
- **Negative Moments:** Lacking a quick way to copy standalone data cards into outside reporting tools.

- **Areas of Opportunity:** How might we add an "Export Story to PDF" utility feature directly inside the top control panel?

5. Extend (Operational Action & Return Loop)

- **Steps:** Corporate teams put the insights into action by updating menu options, while the analyst checks back periodically to evaluate performance metrics.
- **Interactions:** Internal performance review pipelines, monthly data refresh processes.
- **Goals & Motivations:**
 - "Help me track if our menu updates successfully captured target consumer segments."
 - "Help me plan out our inventory strategies for the next quarter."
- **Positive Moments:** Reviewing updated data fields and seeing clear improvements in local market share metrics.
- **Negative Moments:** Remembering to log back in to check for new transactional updates every month.
- **Areas of Opportunity:** How might we introduce intelligent, automated alert pins that notify users whenever customer satisfaction values drop below target baseline limits?
